Getting Started in AgView
A tool in preparation for a foreign animal disease emergency

PIPESTONE leads the industry in seeking solutions to challenges farmers face in their operations. Considering the increased probability of African Swine Fever (ASF) reaching US soil, PIPESTONE is encouraging farmers to plan and prepare today. Farm business continuity after a potential nationwide mandatory shutdown is dependent on the flow of these key pieces of information from the farmer to state animal health officials.

That critical information has two parts:

1. A written and approved Secure Pork Supply (SPS) plan for each site.
2. Site location details, pig movement and health status information.

The Secure Pork Supply (SPS) Continuity of Business Plan provides opportunities to voluntarily prepare before an outbreak of foreign animal disease like African Swine Fever. Having an SPS plan in place will better position sites that have no evidence of infection through enhanced biosecurity and have tracked movement records.

If you haven't already done so, please contact your PIPESTONE veterinarian today to get started on your site SPS plan. For handling of site and movement information, PIPESTONE is recommending producers to use a voluntary online platform called AgView

What is AgView?

AgView was developed for producers to securely share their site, movement, test results and Secure Pork Supply (SPS) documentation with their state officials upon request in the event of a foreign animal disease (FAD) incident. AgView is free and your farm's information is accessible only by you as the account holder unless you have expressly agreed to release your information to a requesting USDA and state animal health official.

Here is how you get started with Ag View:

1. Go to www.agview.com and click on "Create an Account"
2. Create your free AgView account by
    a. Registering as a "Producer"
    b. Filling out all the information required and clicking "Create Account"
3. Navigation within the AgView platform is from the black menu bar along the left side of the screen.
4. Once you have site and movement data entered, the map offers various views to display your pig movements.
5. AgView offers multiple options for entering data into your AgView account.
    a. In app data entry
    b. Uploading data files
    c. Data sharing options with software platforms such as MetaFarms, PigChamp and Prairie Systems.
