

HOW'S YOUR WATER?

Activate®

The ACTIVATE® nutritional feed acid family of products contains a blend of organic acids and methionine hydroxy analogue (HMTBa), a highly bioavailable source of methionine. The combination of organic acids in ACTIVATE effectively reduces the pH of the gastrointestinal tract, promotes the establishment of a desirable and more balanced intestinal flora and aids in digestion, providing more nutrients from feed and improving performance.

“Activate is a great tool used in reducing the risk of pigs breaking with an enteric disease like hemolytic E.coli during stressful periods. It is helpful to run this product to gut-challenged flows during critical periods like placement or diet transitions in the nursery.”

Talk to your vet to learn more about utilizing this product in your operation.

Veterinarian
PIPESTONE

ACTIVATE WD 5GL HZ

ACTIVATE® US WD MAX is for use in drinking water, providing nutritional benefits (methionine activity) and drinking water acidification, making the drinking water a less favorable environment for pathogen growth (e.g., Salmonella, E. coli, Campylobacter, etc.).

pH Meter

Easily test and monitor pH and temperature of water with a HM Digital Pro HM pH Meter.
